Build a GIF search application that mimics GIPHY.

Website link: https://giphy.com/

Key Features:

GIF Search Functionality: Search by keyword, infinite scrolling, and trending GIFs

GIF Preview & Details: Full-screen view, and tags/details on hovering

GIF Sharing: Copy URL, share on social media, just mimic that we can copy the link, it need not to be an actual link that we can share to view the GIFs (Main part is to use URL shortener algorithm here)

Favorites/Collections: Mark and organize favorite GIFs

Comments and Likes: Add comments, upvote, and like GIFs (Use local storage to store this information)

Search Filters: Filter by rating and category

You can use your own creativity to add more features too, above are the minimum features that you need to add.

- To store information, use Local Storage.
- You can find the API for getting gifs (Google it)
- Please ensure that it should have good UI.
